U.S. GAMER

OFFICIAL COMPETITION RULEBOOK

GLOBAL COMPETITION STANDARD

EDITION 1.0

Effective August 1, 2026

Integrity | Dignity | Skill | Safety | Accountability

VISAUSD™

Document Control and Authority

CONTROL	OFFICIAL VALUE
Document ID	USG-CSR-001
Title	U.S. Gamer Official Competition Rulebook
Edition	1.0 - Global Competition Standard
Status	Official controlled rulebook
Effective date	August 1, 2026
Review date	August 1, 2027, or earlier if required
Rule owner	U.S. Gamer Competition Standards Council
Applies to	Sanctioned online, local, hybrid, invitational, league, and championship events

AUTHORITY This Rulebook is binding when incorporated into an Event Schedule, sanction letter, player agreement, or organizer contract. Local law, platform terms, and publisher rules remain controlling where they impose stricter requirements.

Standards position. This is a private U.S. Gamer competition standard. References to public international, technical, safety, or financial frameworks are informational and do not represent certification, sponsorship, adoption, or endorsement by the cited institutions.

Interpretation authority. The Chief Competition Officer, or an appointed independent panel, issues official interpretations. No organizer may waive player-safety, anti-bullying, anti-retaliation, anti-cheating, safeguarding, or due-process protections.

Order of precedence

1. Applicable law and binding regulatory requirements.
2. Platform, publisher, and network terms that lawfully govern the game or service.
3. The published U.S. Gamer Event Schedule and approved Game Rules Addendum.
4. This Official Competition Rulebook.
5. Written match-official instructions issued consistently with the documents above.

PLAYER CODE

The Ten Rules of U.S. Gamer Competition

CODE OF HONOR Win with skill. Lose with dignity. Protect the game, the people, and the truth of the result.

1	**Compete honestly**	Use only permitted hardware, software, accounts, strategies, and assistance.
2	**Respect every person**	No bullying, harassment, discrimination, threats, humiliation, or retaliation.
3	**Never backstab off-platform**	Do not sabotage teammates, leak confidences, manipulate devices, file false reports, or covertly harm another participant.
4	**Protect minors and vulnerable people**	Report safety concerns immediately and follow all safeguarding directions.
5	**Preserve match evidence**	Do not delete, alter, fabricate, or conceal relevant logs, messages, recordings, or device data.
6	**Keep credentials secret**	Never request, transmit, or expose another person's seed phrase, private key, password, or biometric data.
7	**Reject corruption**	No bribes, collusion, match-fixing, insider wagering, coercion, or undisclosed conflicts.
8	**Follow officials lawfully**	Comply with pause, inspection, safety, and evidence-preservation instructions, subject to appeal.
9	**Disclose money clearly**	All entry fees, prize rules, service fees, exchange rates, taxes, and network costs must be known before commitment.
10	**Leave the competition stronger**	Act with sportsmanship, accessibility, care for the venue, and respect across cultures.

ARTICLE 1

Scope, Authority, and Definitions

One global baseline, implemented through transparent event-specific rules.

1.1 Scope

This Rulebook governs U.S. Gamer-sanctioned competitions, qualifiers, exhibitions, leagues, championships, online ladders, hybrid events, and any associated wallet, prize, broadcast, or player-conduct activity identified in an Event Schedule.

An Event Schedule must identify the game, platform, competition format, eligibility class, jurisdiction, time zone, language, prize model, approved hardware, technical addendum, appeal deadlines, and responsible officials. Silence never authorizes an organizer to reduce safety or fairness protections.

1.2 Core definitions

TERM	OPERATIVE MEANING
Competition Area	The physical or digital environment in which a match is played, observed, administered, or transmitted.
Event Schedule	The binding event-specific instrument that supplements this Rulebook.
Game Rules Addendum	Title-specific rules for maps, modes, scoring, exploits, patches, substitutions, pauses, and victory conditions.
Match Record	The authoritative evidence package: roster, configuration, logs, recordings, official notes, result, and settlement state.
Participant	A player, substitute, coach, team manager, analyst, official, contractor, volunteer, or credentialed guest.
Protected Report	A good-faith safety, integrity, safeguarding, accessibility, financial, or ethics complaint.
Real-Value Event	An event involving money, cryptocurrency, redeemable credit, or any transferable item of material value.
Sanctioned Event	An event formally approved to use the U.S. Gamer name and this Rulebook.

1.3 Rule acceptance

Registration constitutes agreement to the published rules, privacy notice, conduct code, and adjudication process. Material changes after registration require notice and, where the change affects price, eligibility, prize, privacy, or competitive conditions, affirmative re-acceptance or a penalty-free withdrawal option.

ARTICLE 2

Eligibility, Registration, and Identity

Every competitor is known, properly classified, and eligible before play begins.

2.1 Minimum requirements

- Use one verified competition identity and disclose all alternate or legacy accounts requested by the organizer.
- Meet the age, residency, rating, platform, rank, and qualification criteria in the Event Schedule.
- Hold no active suspension or ineligibility status applicable to the event.
- Complete required identity, tax, sanctions, or payout verification before a Real-Value Event deadline.
- Disclose material conflicts, including ownership, employment, household, financial, coaching, or close personal relationships with officials or opponents when relevant to impartiality.

2.2 Age classes

Events must publish an age class. Unless local law and the Event Schedule provide otherwise, Real-Value Events are limited to adults who have reached the age of majority in their jurisdiction. Youth participation requires guardian consent, a designated safeguarding officer, age-appropriate communications, restricted data collection, and a prize method lawful for minors.

2.3 Roster integrity

A team may field only registered players and approved substitutes. Account sharing, identity substitution, smurfing to defeat eligibility controls, or playing for another person is prohibited. Emergency substitutions require written official approval and must not create an unfair strategic advantage.

IDENTITY PROTECTION Officials may verify identity but must never request a wallet seed phrase, private key, complete password, or biometric template.

ARTICLE 3

Event Classes and Competition Formats

The format must be understandable before registration and stable once play begins.

3.1 Event classes

CLASS	PURPOSE	MINIMUM CONTROL LEVEL
Community	Local or online play with no transferable prize value	Basic identity, published format, conduct and safety controls
Rated	Ranked competition affecting official standing	Verified identity, match records, certified officials, appeal channel
Championship	Regional, national, or global title competition	Full technical controls, independent integrity lead, broadcast and evidence plan
Real-Value	Any event with money, cryptocurrency, redeemable credit, or valuable property	Financial compliance, fee disclosure, verified payout, enhanced age and identity controls
Youth	Any event that admits a participant under 18 or the local age of majority	Safeguarding plan, guardian process, restricted communications, trained personnel

3.2 Required format disclosures

- Bracket or league format, seeding method, match length, scoring, tiebreakers, advancement, and elimination conditions.
- Map, stage, character, loadout, side, server, and host-selection method.
- Patch version, downloadable content, approved mods, and known prohibited exploits.
- Pause, disconnect, remake, reschedule, no-show, forfeit, and substitution rules.
- Evidence captured, broadcast delay, voice recording, referee access, and review technology.

3.3 Format changes

Officials may make a narrowly tailored format change only for safety, law, platform outage, force majeure, or manifest competitive necessity. The change, reason, affected matches, and remedy must be recorded. A change may not target a particular participant or retroactively convert a lawful result into a violation.

ARTICLE 4

Match Operations and Equipment

A match is an auditable process from check-in through final result.

4.1 Match lifecycle

1. Check-in: verify roster, identity, eligibility, equipment, network, accessibility needs, and conflicts.
2. Configuration lock: record game version, mode, map, sides, controller profiles, server, and approved tools.
3. Ready confirmation: each side confirms readiness before the official start signal.
4. Live match: officials monitor play, communications, device state, and incidents within the announced evidence scope.
5. Result capture: the official system records score, winner, logs, relevant media, interruptions, and protests.
6. Review window: officials resolve immediate issues before declaring the result final.
7. Settlement: any rating, prize, or wallet action follows only after the result reaches the required finality state.

4.2 Equipment equality

Organizer-supplied stations must be materially equivalent. Players may inspect assigned stations and request a documented correction before play. Personal peripherals require prior approval, current firmware where applicable, and inspection on request. Devices that inject commands, automate play, alter network traffic, conceal inputs, or defeat platform controls are prohibited.

4.3 Disconnections and technical pauses

The Game Rules Addendum must define pause authority and reconnect limits. A player must report a material technical issue immediately and stop exploiting it. Officials preserve the state, distinguish player-caused from external failure, and choose the least disruptive fair remedy: resume, checkpoint restore, round replay, match remake, reschedule, or result confirmation.

NO SELF-HELP A participant may not disconnect, reset, alter a station, confront another player, or seize equipment to correct a perceived problem. Request an official pause.

ARTICLE 5

Competitive Integrity and Fair Play

The official result must reflect skill under the published rules - never corruption or hidden interference.

5.1 Prohibited integrity conduct

- Cheats, unauthorized scripts, bots, macros, automation, input spoofing, aim assistance, packet manipulation, memory editing, exploit tools, or unauthorized overlays.
- Account sharing, impersonation, ghosting, stream sniping, unauthorized coaching, hidden communications, or receiving prohibited information during play.
- Match-fixing, intentional underperformance, collusion, result trading, bracket manipulation, prize splitting that changes play, or prearranged outcomes.
- Bribery, kickbacks, coercion, threats, insider wagering, or betting on a match in which the person has confidential information or influence.
- Evidence destruction, log deletion, fabricated screenshots, edited recordings presented as original, false witness statements, or obstruction of an inspection.
- Exploiting a known technical defect after an official prohibition or failing to disclose a newly discovered exploit that creates a material unfair advantage.

5.2 Artificial intelligence

AI may be used for training, accessibility, analysis, translation, or broadcast only when the Event Schedule permits it and the use does not play, decide, aim, react, communicate hidden information, or automate a competitive task for the participant. Approved accessibility assistance must be documented and designed to provide access rather than an unrelated advantage.

5.3 Duty to report

A participant who becomes aware of credible match-fixing, cheating, bribery, safeguarding risk, or evidence tampering must promptly use the protected reporting channel. Good-faith reporting is protected even when the allegation is not substantiated. Knowingly false or malicious reporting is a separate violation.

ARTICLE 6

Anti-Bullying and Anti-Backstabbing Standard

Zero tolerance for harassment, covert sabotage, retaliation, and real-world betrayal of competitive trust.

MANDATORY STANDARD Substantiated bullying or backstabbing conduct may result in immediate removal, disqualification, prize forfeiture, suspension, and placement on the U.S. Gamer Ineligibility Register (Blacklist), up to a permanent global bar.

6.1 Bullying prohibited

Bullying means repeated or severe conduct that a reasonable person would understand as intended or likely to intimidate, humiliate, isolate, degrade, threaten, control, or harm another person. It includes conduct in matches, team spaces, direct messages, voice chat, social media, venues, travel, training, and third-party communities when connected to U.S. Gamer participation.

- Insults, slurs, sexual harassment, threats, stalking, unwanted contact, demeaning memes, dogpiling, or coordinated humiliation.
- Doxxing, swatting, exposure of private information, unwanted outing, impersonation, or threats against family, employment, housing, education, immigration status, or personal safety.
- Coercive team control, hazing, forced silence, exclusion from required information, economic pressure, or punishment for setting a boundary.
- Retaliation against a reporter, witness, supporter, official, or person requesting accessibility or safeguarding help.
- Using rank, fame, ownership, sponsorship, money, or platform access to pressure a person into silence or unwanted conduct.

6.2 Backstabbing conduct prohibited

Backstabbing conduct is deliberate, concealed, bad-faith harm against a teammate, opponent, official, organizer, or community member where the actor exploits trust, access, confidentiality, or dependency. It is a competition-integrity violation even when it occurs outside the game client.

- Leaking private team strategies, credentials, medical or personal information, or protected reports to cause harm or gain leverage.

- Sabotaging equipment, accounts, wallet access, network settings, travel, check-in, schedules, team files, practice, or communications.
- Inducing a no-show, false forfeit, missed deadline, or roster failure through intentional deception or withheld required information.
- Filing, arranging, or amplifying knowingly false allegations; manufacturing evidence; recruiting others to isolate or discredit a target.
- Secretly diverting prize money, changing a wallet address, interfering with a payout, or misrepresenting a team member's consent.
- Retaliating because a person changed teams, ended a relationship, refused a demand, reported misconduct, or testified truthfully.

6.3 Competitive deception exception

Bluffing, hidden roles, feints, alliance changes, or strategic deception are not backstabbing when the game and Event Schedule expressly permit them as mechanics and they remain inside the authorized competitive environment. This exception never permits real-world harassment, credential abuse, confidential-data misuse, match-fixing, financial deception, or threats.

6.4 Immediate protection

Officials may separate participants, restrict contact, preserve evidence, remove access, relocate a person, pause play, or impose a provisional suspension where reasonably necessary to protect safety or integrity. A provisional measure is not a final finding and must receive prompt review.

6.5 Blacklist threshold and fairness

Blacklist status requires a substantiated finding under Article 10 and a sanction under Article 12, except for a temporary emergency safety hold. Rumor, popularity, protected characteristics, lawful criticism, union or player organizing, refusal to pay an undisclosed fee, or a good-faith report can never support blacklist status.

The decision must identify the proven conduct, evidence standard, sanction scope, effective period, review date, and appeal right. Records are access-controlled and may not be used for public shaming, doxxing, or harassment.

ARTICLE 7

Communications, Public Conduct, and Team Duties

Competition speech can be energetic; personal abuse and deception cannot be normalized.

7.1 Match communications

Only approved channels, languages, participants, and devices may be used during a live match. Trash talk is permitted only if the Game Rules Addendum allows it and it remains non-discriminatory, non-threatening, non-sexual, non-personal, and stoppable on official direction.

7.2 Team duties

- Provide teammates timely access to required schedules, roster decisions, match materials, and payout terms.
- Document team ownership, prize shares, agent authority, sponsorship obligations, and decision rights before competition.
- Maintain a safe channel for internal concerns and prohibit retaliation.
- Do not compel access to personal accounts, seed phrases, private messages, or unrelated devices.
- Notify officials promptly when a team dispute threatens a match, roster, payout, or participant's safety.

7.3 Public statements

Participants may criticize decisions and advocate for reform, but may not knowingly publish false factual claims, disclose protected personal information, threaten officials, direct harassment, or interfere with an active investigation. Officials must not use confidentiality as a pretext to conceal safety failures or prevent lawful reporting.

ARTICLE 8

Safeguarding Minors and Vulnerable Participants

The best interests, voice, dignity, and safety of the participant come before event convenience or publicity.

8.1 Safeguarding plan

Any event admitting a minor or identified vulnerable participant must appoint a safeguarding lead, publish reporting channels, screen and train relevant personnel as permitted by law, establish supervision and travel rules, define emergency escalation, and provide age-appropriate information.

8.2 Minimum boundaries

- No sexual conduct, grooming, exploitation, hazing, humiliating initiation, or exchange of sexual content involving a minor.
- No avoidable one-to-one private communication between an adult in authority and a minor; use recorded or guardian-visible channels where appropriate.
- No sharing of a minor's location, schedule, legal name, school, contact details, wallet details, or image beyond documented consent and necessity.
- No alcohol, illegal drugs, gambling product, or real-value crypto solicitation directed to minors.
- A minor may stop an interview, photo session, stream appearance, or nonessential interaction without competitive penalty.

8.3 Mandatory response

Immediate danger must be referred to emergency services or the competent safeguarding authority. Competition officials preserve evidence without conducting an amateur criminal investigation, protect the reporter from retaliation, and cooperate lawfully with guardians and authorities while respecting the participant's safety and privacy.

ARTICLE 9

Accessibility, Inclusion, and Equal Participation

Access decisions are individualized, timely, confidential, and competitively reasoned.

9.1 Equal treatment

No person may be excluded, harassed, seeded unfairly, denied service, or disciplined because of race, color, ethnicity, national origin, language, sex, gender, gender identity, sexual orientation, religion, age, disability, pregnancy, family status, veteran status, socioeconomic status, or another status protected by applicable law.

9.2 Accommodation process

1. The participant requests an accommodation through a confidential channel as early as reasonably possible.
2. The accessibility official identifies the functional barrier, not unnecessary medical detail.
3. The organizer and participant assess effective options, competitive impact, privacy, and technical feasibility.
4. The approved accommodation is documented for officials and implemented consistently.
5. A denial must state the reason and provide an expedited review before elimination where practicable.

9.3 Accessible event baseline

- Step-free venue routes or equivalent access, accessible restrooms, seating, and emergency egress where physical events are held.
- Captioning or transcripts for essential announcements; visual alternatives for audio-only match signals; readable contrast and scalable text.
- Controller remapping, approved adaptive devices, breaks, quiet areas, interpreters, and support persons where reasonable.
- Language assistance for safety, rules, consent, protest, and disciplinary communications.

ARTICLE 10

Officials, Evidence, and Adjudication

A strict rulebook requires neutral fact-finding, reliable evidence, and reasoned written decisions.

10.1 Official roles

ROLE	PRIMARY RESPONSIBILITY
Tournament Director	Event delivery, schedule, staffing, venue, and operational decisions
Chief Competition Officer	Rule interpretation, match integrity, official assignments, and final event-level rulings
Match Official	Check-in, configuration, live supervision, score, incidents, and initial ruling
Integrity Officer	Cheating, corruption, evidence preservation, conflicts, and protected reports
Safeguarding Officer	Minor and vulnerable-person safety, protective action, and external referrals
Accessibility Officer	Accommodation process and accessible event delivery
Financial Control Officer	Prize funding, fee disclosure, wallet verification, authorization, and settlement record
Appeals Panel	Independent review of material procedural, factual, or sanction errors

10.2 Evidence standard

Ordinary competition violations are decided on the balance of probabilities: whether the violation is more likely than not. A permanent bar, fraud finding, or severe reputation-affecting sanction requires clear and convincing evidence. Emergency protective action may be based on a credible, articulable safety or integrity risk pending full review.

10.3 Evidence handling

- Record origin, collector, date, time zone, device or account, file hash when practical, transfers, and material edits.
- Preserve original files and distinguish originals from clips, screenshots, transcripts, summaries, and reenactments.
- Give the responding person a fair summary of the allegation and material evidence, subject to lawful witness-safety redactions.
- Exclude or reduce weight for unreliable, unlawfully obtained, materially altered, or unverifiable evidence.
- Disclose official conflicts and replace a decision-maker whose impartiality could reasonably be questioned.

10.4 Written decision

A material ruling states jurisdiction, allegation, proven facts, disputed facts, evidence considered, rule applied, finding, remedy or sanction, effective time, review date, and appeal route. Personal data is minimized.

ARTICLE 11

Protests, Appeals, and Dispute Resolution

Speed matters in competition; fairness matters more.

11.1 Match protest

A match protest must be made within the Event Schedule deadline, normally before the next affected match begins. It must identify the match, disputed event, rule, requested remedy, and available evidence. An official may accept a late protest where concealed misconduct, newly available evidence, safeguarding, or technical impossibility justifies the delay.

11.2 Appeal grounds

- Material misapplication of a rule or use of a rule not in force at the relevant time.
- A significant procedural failure, undisclosed conflict, or denial of a meaningful opportunity to respond.
- A finding unsupported by the applicable evidence standard.
- New evidence that could not reasonably have been produced earlier and may change the outcome.
- A sanction that is clearly disproportionate or inconsistent without a reasoned distinction.

11.3 Appeal procedure

The appeal body must be independent of the initial decision. It may affirm, modify, vacate, remand, or order a new hearing. It may not increase a sanction solely because a person appealed. Emergency safety restrictions remain in effect only as long as reasonably necessary and must be reviewed promptly.

11.4 External rights

Nothing in this Rulebook prevents a person from contacting law enforcement, a regulator, child-protection authority, court, emergency service, union, attorney, or other lawful external body. Internal remedies do not waive non-waivable legal rights.

ARTICLE 12

Sanctions and the Ineligibility Register

Sanctions protect people and competition, correct conduct, and deter repetition without arbitrary punishment.

12.1 Sanction principles

Sanctions are individualized and proportionate. Officials consider intent, harm, advantage, concealment, repetition, retaliation, age, vulnerability, cooperation, admission, remediation, prior findings, and the need to protect others. Similar cases should receive similar outcomes, with written reasons for material differences.

LEVEL	TYPICAL GRAVITY	AVAILABLE OUTCOMES
Level 1	Minor, first-time, promptly corrected	Education, coaching directive, formal warning, technical correction
Level 2	Material but limited harm or advantage	Round or map loss, match loss, fine where lawful and disclosed, short suspension
Level 3	Serious integrity or conduct breach	Event disqualification, prize forfeiture, 1-12 month bar, probation
Level 4	Severe, repeated, coordinated, retaliatory, or concealed breach	12-36 month bar, cross-event blacklist status, restitution where lawful
Level 5	Extreme violence, exploitation, severe doxxing, corruption, or persistent dangerous conduct	Permanent global bar and blacklist status; authority referral where required

12.2 U.S. Gamer Ineligibility Register (Blacklist)

The Register is the controlled official record of active disqualification, suspension, probation, role restriction, or permanent bar. It exists to stop sanctioned persons from evading discipline through new accounts, teams, regions, organizer changes, or aliases.

- Minimum record: verified participant ID, aliases needed for matching, decision ID, prohibited roles, geographic and event scope, start date, end or review date, and appeal status.
- Access is limited to authorized integrity, safeguarding, registration, legal, and event personnel with a legitimate need to know.
- Public disclosure is limited to what is necessary, lawful, accurate, and proportionate. The Register may never become a harassment list.

12.3 Status review and correction

- A person may request correction of identity or status data and receive notice when an active sanction expires or is lifted.
- A time-limited bar must have a defined end or review date. Permanent status requires Level 5 findings and periodic administrative confirmation that the record remains accurate.

12.4 Rehabilitation and reinstatement

Where safety permits, a decision may require training, counseling, restitution, no-contact terms, monitoring, or a conduct plan. Reinstatement depends on completed conditions, elapsed sanction, truthful disclosure, current risk, and a written decision. No victim is required to participate in reconciliation.

ARTICLE 13

Prizes, Wallets, Fees, and Settlement

The result is determined by competition; value moves only through disclosed, verified, lawful controls.

13.1 Real-value event authorization

A Real-Value Event may operate only after the organizer confirms applicable age, licensing, consumer, gaming, contest, tax, sanctions, anti-money-laundering, custody, privacy, and payment requirements. Where authorization is uncertain, the event must use no-value points or nontransferable game units until cleared.

13.2 Mandatory financial disclosure

- Gross prize pool and proof-of-funding method; entry price and refund rules; guaranteed and conditional components.
- Host, service, platform, processor, network, gas, miner, currency-conversion, withdrawal, and tax-withholding amounts or calculation methods.
- Net winner amount or a worked example, settlement asset, exchange-rate source and timestamp, confirmation requirement, and expected timing.
- Who has custody, whether funds are escrowed, who can authorize a transfer, and what happens if a transaction fails or is sent to an incorrect address.
- Geographic or participant restrictions and identity, tax, sanctions, or source-of-funds checks.

NO HIDDEN FEE No host or service fee may be created or increased after entry, match lock, or wallet authorization. A participant must see the gross amount, every fee, and the expected net amount before approval.

13.3 Wallet and address verification

A payout address is verified through an approved signed challenge, authenticated device flow, or two-person manual procedure. NFC, QR, deeplink, or WalletConnect messages may carry an address, amount, network, nonce, and authorization request, but never a seed phrase or private key. Address replacement after match lock requires re-verification and fraud review.

13.4 Result-to-settlement states

STATE	MEANING
Result recorded	Score and provisional winner captured; protest window open
Winner confirmed	Competition review complete; payout authorization may begin
Transaction authorized	Participant approved the disclosed recipient, amount, asset, fee, and network
Transaction sent	Signed transaction accepted for broadcast; transaction ID recorded
Confirming	Network finality threshold not yet reached
Transaction settled	Required confirmations reached and accounting record reconciled
Failed or corrective action	Failure documented; any correction uses a new authorized transaction

13.5 Payout control

The match result system and payout engine must be logically separated. At least two authorized persons approve organizer-controlled prize transfers above the Event Schedule threshold. Organizer prize wallets should use strong authentication and, where appropriate, multisignature or hardware protection. An immutable blockchain transfer cannot be reversed; correction requires a separately authorized transaction and complete audit trail.

ARTICLE 14

Cybersecurity, Privacy, and Data Governance

Protect the participant, the result, and the keys - before, during, and after competition.

14.1 Security baseline

- Inventory systems, accounts, devices, data, dependencies, privileged roles, and third-party services.
- Use least privilege, strong unique authentication, role separation, encryption in transit, secure backups, and timely patching.
- Log sensitive administrative, match-result, wallet, payout, roster, and disciplinary actions with synchronized timestamps.
- Maintain an incident response plan covering detection, containment, evidence preservation, player notice, recovery, and lessons learned.
- Test restoration, failover, match-record integrity, and wallet recovery before a Championship or Real-Value Event.

14.2 Secret-handling rules

Seed phrases, private keys, full passwords, recovery codes, and biometric templates are prohibited from official chat, tickets, screenshots, broadcasts, match logs, or organizer forms. Wallet recovery occurs on the participant's trusted device. Officials verify control through public addresses and signed challenges only.

14.3 Privacy baseline

Collect only data necessary for eligibility, safety, competition, payment, security, and legal duties. Publish purpose, categories, recipients, retention, security, participant rights, and contact route. Sensitive data is compartmentalized and access-logged. A protected report is not shared beyond those who need it to act fairly and safely.

14.4 Incident classification

A suspected credential leak, wallet compromise, payout-address change, match-log alteration, doxxing event, ransomware incident, or unauthorized access triggers immediate preservation and risk assessment. Officials may freeze a payout or result state only for a documented integrity or safety reason and must review the hold promptly.

ARTICLE 15

Broadcast, Media, Audio, and Safe Listening

Global presentation must preserve player dignity, competitive evidence, audience access, and hearing safety.

15.1 Broadcast controls

- Publish whether match video, voice, chat, biometric confirmation, device screens, or venue audio may be recorded.
- Use delay and observer controls proportionate to stream-sniping and confidential-strategy risk.
- Do not display seed phrases, private keys, full wallet recovery screens, private messages, legal names of protected participants, or incident-report details.
- Provide captions or transcripts for essential broadcast and event announcements where reasonably practicable.
- Correct materially false result or discipline information promptly and preserve the original correction record.

15.2 Music and media rights

Organizers must hold or obtain the rights needed for music, game footage, player likenesses, commentary, clips, and sponsor content. Player media consent must be specific, understandable, revocable where law requires, and separate from safety-critical participation consent.

15.3 Safe listening

Headset, venue, stream, and playback systems must provide practical volume control, warnings, breaks, and monitoring appropriate to exposure. Officials must respond to reported discomfort, tinnitus, pain, or hearing difficulty without competitive retaliation. Events should use the WHO-ITU global standard for safe listening in video gameplay and esports as a technical reference.

ARTICLE 16

Venue Safety, Emergency Action, and Sustainability

No match or schedule takes priority over life, health, accessibility, or lawful emergency response.

16.1 Emergency action plan

- Named incident commander, emergency contacts, venue address, evacuation and shelter routes, accountability method, and accessible egress.
- Medical response, fire, severe weather, violence, missing person, safeguarding, cyber incident, utility loss, and crowd-control procedures.
- Clear authority to pause or abandon play, silence systems, stop a broadcast, and preserve evidence.
- Staff briefing, participant orientation, communication redundancy, and post-incident welfare support.

16.2 Health and fatigue

Schedules must allow hydration, meals, restroom access, sleep, medication, prayer, accessibility, and reasonable recovery. Officials may require a health pause where fatigue, heat, lighting, sound, stress, or illness creates a material safety risk. A person seeking medical help may not be penalized for the request itself.

16.3 Sustainable event practice

Event planning should assess social, economic, and environmental impacts; engage affected stakeholders; reduce unnecessary travel, energy, waste, and disposable materials; provide accessible procurement; and document improvement. ISO 20121:2024 may be used as a management-system reference; this Rulebook does not claim ISO certification.

ARTICLE 17

International Events and Local Addenda

A global standard succeeds by preserving a common core while respecting lawful local implementation.

17.1 Local Event Addendum

Each cross-border or host-country event must publish a Local Event Addendum addressing governing law, age, visas, tax, payments, sanctions, language, privacy, accessibility, safeguarding, emergency contacts, insurance, consumer rights, and any publisher or platform restrictions. A local rule may strengthen but not silently weaken the core integrity and safety articles.

17.2 Language and interpretation

The Event Schedule identifies the authoritative language. Safety, consent, fee, protest, and disciplinary information must be available in a language the affected participant can understand, using qualified interpretation where stakes require it. Translation ambiguity is resolved against surprise and in favor of fair notice.

17.3 Cultural respect

Officials and participants must respect lawful cultural, religious, disability, gender, and family needs. Cultural difference never excuses abuse, discrimination, exploitation, corruption, or denial of due process. Event calendars should account for major local observances where reasonably possible.

17.4 Cross-border discipline

An active U.S. Gamer suspension applies across sanctioned regions to the scope stated in the decision. Recognition of an external organization's discipline requires identity verification, a sufficiently fair process, an applicable rule, a reasoned risk assessment, and an opportunity for the affected person to respond.

ARTICLE 18

Adoption, Review, and Change Control

The Rulebook is controlled, auditable, and improved through evidence and participant voice.

18.1 Adoption

Edition 1.0 becomes effective on the date shown in Document Control when adopted by the U.S. Gamer Competition Standards Council. An event may adopt a later edition only with notice. The edition in force at registration governs unless a lawful emergency amendment is necessary.

18.2 Amendment classes

CLASS	DESCRIPTION	CONTROL
Editorial	Typographic, citation, layout, or clarification with no substantive effect	Publish corrected copy and change log
Operational	Process improvement that does not change eligibility, prize, sanction, or core rights	Publish notice before use
Material	Changes eligibility, conduct, sanctions, evidence, prize, fees, privacy, or appeal rights	Council approval, version increment, participant notice
Emergency	Immediate safety, legal, platform, or integrity necessity	Narrow temporary directive, recorded reason, prompt review and sunset

18.3 Annual review

The Council reviews incident trends, sanctions consistency, appeals, accessibility requests, safeguarding reports, technical failures, cybersecurity events, payout disputes, participant feedback, and relevant standards at least annually. Personal data is aggregated or de-identified where possible.

18.4 Official change log

Each release records edition, effective date, changed articles, reason, approving authority, migration rule, and superseded edition. Archived editions remain available for historical cases and audits.

APPENDIX A

Matchday Operating Procedure

OPERATOR RULE Every match must be reproducible from the Match Record without relying on memory or private side conversations.

TIME	ACTION	OWNER	CONTROL CHECK
T-60 to T-30	Station and network validation	Match official	Patch, game, map pool, server, capture, clock, peripherals, accessibility
T-30 to T-15	Participant check-in	Registration lead	Identity, roster, eligibility, conflict, safeguarding and accommodation flags
T-15 to T-5	Configuration lock	Match official	Accounts, sides, controllers, overlays, comms, recording, wallet IDs if applicable
T-5	Ready check	Both captains	Rules acknowledged; protests about station raised now
T-0	Official start	Match official	Start signal and authoritative timestamp
Live	Monitor and record	Match and integrity officials	Score, pauses, warnings, comms, device and observer state
T+0 to T+10	Result review	Match official	Score, logs, incident notes, immediate protest
After review	Winner confirmation	Chief Competition Officer	Finality state and advancement
Post-finality	Settlement	Financial Control Officer	Disclosed amount, verified address, authorization, transaction status

Command language

COMMAND	MEANING
READY	Configuration complete; player accepts station state subject to latent defects.
LIVE	Official match begins; competition restrictions are active.
PAUSE	Stop permitted actions immediately and await instruction.
RESUME	Continue from the official state and countdown.
STOP	Match activity ends for safety, integrity, or terminal technical cause.
RESULT RECORDED	Score captured but not necessarily final.
WINNER CONFIRMED	Competition review complete; rating or payout may proceed.

APPENDIX B

Sanction Matrix

This matrix is a starting range, not an automatic sentence. Officials apply Article 12 factors and explain departures. Multiple violations may be combined, but the same conduct may not be punished twice under duplicative labels.

VIOLATION	LEVEL	STARTING RANGE	AGGRAVATING SIGNALS
Late check-in / minor procedure	1	Warning to map loss	Repeated disregard; disruption
Unauthorized peripheral with no demonstrated advantage	1-2	Correction, warning, possible round loss	Concealment; recurrence
Cheat tool, bot, input automation, account substitution	3-5	DQ, forfeiture, 12 months to permanent bar	Use in match; sale; coordination; evidence destruction
Match-fixing, bribery, insider wagering	4-5	DQ, forfeiture, multi-year to permanent bar	Leadership; payment; repeat; cross-event scope
Bullying or harassment	2-5	No-contact terms, DQ, suspension, blacklist	Threats; protected targeting; repetition; power imbalance
Backstabbing / covert sabotage	3-5	DQ, forfeiture, 12 months to permanent blacklist	Credential, payout, evidence, safety, or livelihood harm
Doxxing, swatting, severe threats	5	Permanent bar; authority referral where required	Actual harm; targeting minor; coordination
Retaliation against reporter or witness	3-5	DQ, suspension, blacklist	Power abuse; intimidation; evidence interference
Hidden or changed financial fee	3-5	Refund, event sanction, organizer bar	Intent; scale; vulnerable users; concealment
Seed phrase/private key solicitation	4-5	Immediate removal, long-term or permanent bar	Use, loss, theft, targeting minor
Evidence fabrication or destruction	3-5	Adverse inference, DQ, suspension, blacklist	Materiality; coordination; official involvement

APPENDIX C

Incident, Protest, and Appeal Forms

C.1 Incident report

Case ID	_____	**Date / UTC**	_____
Reporter	_____	**Protected report?**	Yes / No / Unknown
Affected person	_____	**Immediate danger?**	Yes / No
Event / match	_____	**Official notified**	_____
Category	Bullying / backstabbing / cheating / safety / finance / other	**Requested protection**	_____

Describe what happened (facts, not conclusions):

Evidence and where preserved:

Witnesses and safe contact method:

Immediate action taken and by whom:

C.2 Match protest

- Match ID, date, game, stage, players or teams, and official.
- Exact disputed event and timestamp; rule or Event Schedule provision.
- Immediate notice given and why the protest is timely.
- Requested remedy and why it is the least disruptive fair remedy.
- Evidence list, source, integrity, and preservation location.

C.3 Appeal statement

- Decision ID and date; appellant and authorized representative.
- Appeal ground under Article 11.2.
- Specific factual, procedural, rule, or proportionality error.
- New evidence and why it was unavailable earlier, if applicable.
- Requested outcome and any urgent interim protection.

APPENDIX D

Technical Minimum Standard

DOMAIN	MINIMUM CONTROL
Time	All competition, log, transaction, and evidence systems use synchronized UTC-capable clocks.
Identity	Unique participant identity; role-based official accounts; no shared administrator credentials.
Authentication	Strong authentication for officials, wallets, payout, evidence, and privileged systems.
Match configuration	Version, map, mode, server, side, controller, assist, overlay, and communication settings captured.
Network	Documented primary and fallback path; monitoring proportionate to event class; no unauthorized traffic manipulation.
Evidence	Original files, access control, retention schedule, chain-of-custody record, and integrity hash when practical.
Wallet	Network and asset displayed; address verified; no seed phrase transmission; explicit amount and fee authorization.
Payout	Competition finality separate from transaction state; dual control above threshold; transaction ID and confirmation state.
Recovery	Tested backup and restoration for match record, roster, bracket, configuration, and organizer-controlled wallets.
Privacy	Data minimization, disclosure, restricted access, secure transfer, breach response, and deletion process.
Accessibility	Approved adaptive controls and communication alternatives tested before live play.
Change control	Emergency patches and configuration changes recorded, approved, communicated, and reviewable.

Recommended evidence package

- Event Schedule and Game Rules Addendum version hashes.
- Roster, identity-verification status, check-in record, conflicts, and approved accommodations.
- Station and software configuration, network endpoint, observer roster, and official assignment.
- Score and result log, relevant telemetry, video or screenshots, incident notes, and protest decisions.
- Winner-confirmation timestamp; payout disclosure and approval; recipient verification; transaction and settlement record.

APPENDIX E

Player and Official Pledges

E.1 Player pledge

I PLEDGE I will compete honestly, respect every person, reject bullying and backstabbing, protect confidential information, report serious misconduct, follow lawful official directions, and accept accountability through a fair process. I will never seek another person's seed phrase, private key, password, or biometric data.

Player legal name / verified ID: _____

Signature: _____ Date / UTC: _____

Team / event: _____

E.2 Official pledge

I PLEDGE I will act impartially, disclose conflicts, protect participants, preserve evidence, explain material decisions, enforce anti-bullying and anti-backstabbing rules without favoritism, minimize personal data, and never retaliate against a good-faith reporter, witness, or appellant.

Official legal name / verified ID: _____

Role: _____ Date / UTC: _____

Signature: _____

APPENDIX F

Competitive Payout Ecosystem Reference

The following supplied system concept illustrates one possible device-to-wallet match and payout architecture. It is not, by itself, an authorization to operate a Real-Value Event, impose a 20 percent fee, use third-party marks, or execute an automatic transfer. Articles 3, 10, 11, 13, and 14 control.

Figure F-1. Supplied conceptual architecture - subject to this Rulebook and applicable law.

Required separation of duties

- The game or match service produces evidence and a provisional result; it does not unilaterally transfer funds.
- A competition official confirms the winner after the review window and resolves protests.
- A financial control function verifies funding, disclosure, recipient, fee, authorization, and legal clearance.
- The wallet signs only an understandable transaction showing network, asset, recipient, amount, and every fee.
- The ledger records submitted and settled states; a failed or incorrect transfer receives a separate corrective record.

APPENDIX G

Reference Frameworks

These sources inform the Rulebook's dignity, inclusion, safeguarding, cybersecurity, financial-risk, sustainability, and safe-listening posture. They are references, not claims of certification or institutional endorsement. Accessed August 1, 2026.

United Nations - Universal Declaration of Human Rights

Human dignity, equality, non-discrimination, privacy, fair hearing, and effective remedy.

UNICEF - Convention on the Rights of the Child

Best interests, non-discrimination, participation, privacy, and protection of children.

United Nations Treaty Collection - Convention on the Rights of Persons with Disabilities

Equality, participation, accessibility, and legal capacity.

UNICEF - International Safeguards for Children in Sport

Safe, inclusive participation and organizational duty of care.

WHO and ITU - Global standard for safe listening in video gameplay and esports

Technical reference for gaming and esports listening safety.

NIST - Cybersecurity Framework 2.0

Govern, identify, protect, detect, respond, and recover cybersecurity outcomes.

ISO - ISO 20121:2024 Event sustainability management systems

Social, economic, and environmental event-management impacts.

FATF - Updated risk-based guidance for virtual assets and virtual asset service providers

Risk-based anti-money-laundering and counter-terrorist-financing considerations for covered activity.

U.S. GAMER™

INSTITUTIONAL TECHNICAL WHITE PAPER

Pop-Up Community Wallet Technology

A governed reference architecture for temporary competitive events, self-custody digital assets, isolated offline game value, and a tamper-evident Records Vault

U.S. Gamer reference implementation • Policy, compliance, security, technology, and event-operations review

This document evaluates a supplied concept and public system materials. It does not certify production readiness, create legal authority, or represent endorsement by any government, standards body, platform owner, or trademark holder.

PUBLIC / STAKEHOLDER REVIEW

VERSION 1.1 • AUGUST 2026

DOCUMENT CONTROL

Decision Brief

A concise statement of the decision, the evidence reviewed, and the conditions required before material deployment.

RECOMMENDED POSTURE

Controlled pilot

No material-value tournament until legal, security, and operations gates are closed.

REFERENCE BUILD

v1.4.2

Public portal materials describe BTC, ETH, Postal Cash, NFC, biometric, recovery, and radio capabilities.

PRIMARY VALUE DOMAINS

3 silos

Bitcoin mainnet, Ethereum mainnet, and isolated Postal Cash game value.

EVIDENCE PLANE

Records Vault

Signed wallet challenge, append-only event records, SHA-256 integrity envelopes, and public archive views.

Decision sought

Authorize a staged evaluation of the Pop-Up Community Wallet model as a **governed event settlement architecture**, not as a person-to-person betting product. Initial pilots should use Postal Cash or low-value test accounts while legal classification, money-transmission analysis, sanctions controls, software assurance, and event integrity controls are independently validated.

PROCEED

Approve a bounded pilot with named owners, a written ruleset, explicit participant disclosures, a security test plan, and no unreviewed custody or commingling.

DO NOT INFER

The CLARITY Act does not itself approve a tournament, waive state gaming law, remove BSA/AML obligations, or certify the U.S. Gamer implementation.

Evidence reviewed

SOURCE	USE IN THIS PAPER	LIMITATION
Sponsor-supplied concept brief	Problem framing and proposed Pop-Up Community Wallet model	Conceptual; not legal advice or implementation evidence
Live usgamer.org portal and Android imagery	Current public feature representation and user journey	Public presentation; not an independent functional certification
Live U.S. Gamer Records Vault	Record-only event lifecycle, signed wallet-control challenge, public archive, integrity operations, and SHA-256 envelopes	Observed public behavior; not a custody, legal-compliance, or cryptographic audit
U.S. Gamer Competition Rulebook v1.0	Integrity, safeguarding, anti-bullying, sanctions, and appeals model	Internal governance artifact; enforcement design remains to be tested
Congress.gov, CRS, FinCEN, OFAC, NIST, FTC	Primary-source legal, identity, sanctions, security, and privacy context	Authorities apply based on facts, roles, and jurisdiction

EXECUTIVE SUMMARY

A Community-Centric Settlement Model

The architectural shift is from merchant-centric payment acceptance to a temporary, rules-governed community with explicit value domains and independently reviewable receipts.

The Pop-Up Community Wallet model proposes that a physical competition venue temporarily become a managed digital community. Participants register a wallet, accept published event rules, authorize entry or game-value transfers, compete, and receive an outcome-based distribution under a disclosed settlement policy. The concept can reduce reliance on card terminals, chargeback workflows, and manual payout vendors while increasing settlement transparency.

The model is strongest when six conditions remain non-negotiable: **self-custody, published rules, separated value domains, participant intent, auditable evidence, and an independent record plane**. The U.S. Gamer Records Vault closes a critical evidence gap by preserving authenticated competition envelopes and integrity hashes without representing itself as a wallet custodian or automatic settlement engine. The model becomes materially riskier when an organizer takes discretionary custody, hides fees, blurs game value with real assets, permits underage or sanctioned participation, or represents competition entry as legally exempt without jurisdiction-specific analysis.

STRATEGIC VALUE

A common mobile chassis can support real-asset settlement and a no-real-value game mode while preserving a consistent event experience.

POLICY BOUNDARY

This paper treats competition administration as distinct from individualized wagers; legal classification still depends on event design and governing law.

Executive findings

- **Architecture:** The three-silo model is conceptually sound only if Bitcoin, Ethereum, and Postal Cash state, identifiers, histories, and authorization paths remain isolated.
- **Security:** Strong local biometric intent is useful but insufficient by itself. Key storage, transaction construction, address verification, anti-replay, dependency governance, and recovery controls require independent assessment.
- **Compliance:** The organizer's actual role determines exposure. Accepting and transmitting value for others can trigger a different analysis from software that merely enables a user-controlled transfer.
- **Competition integrity:** Published rules, eligibility, anti-cheating, anti-bullying, anti-retaliation, dispute resolution, signed wallet-control challenges, and hashed event envelopes are foundational controls, not optional community features.
- **Agile settlement:** Participant-controlled BTC and ETH can serve as portable settlement or prize-funding assets for approved pop-up events, while the Records Vault preserves the rules-to-result evidence chain without taking custody.
- **Deployment:** Postal Cash offers the safest operational proving ground because it is represented as isolated game value with no blockchain or real-world monetary value.

Institutional recommendation

Proceed through gated pilots: first with no-real-value Postal Cash, then with test networks or low-value accounts, and only later with material mainnet value after independent legal opinions, threat modeling, code review, penetration testing, transaction-reconciliation testing, and operator training. Every pilot should produce a Records Vault envelope linking the approved rules, responsible officials, result evidence, settlement references, and any dispute or appeal. Treat every public claim as a control obligation that must be evidenced in operation.

OPERATING CONTEXT

Why Tournament Payments Fragment

Competitive events often assemble temporary operations on top of permanent financial infrastructure that was not designed for short-duration, community-governed settlement.

DIMENSION	CONVENTIONAL STACK	POP-UP COMMUNITY MODEL
Acceptance	Card terminal, payment gateway, merchant account	Participant-controlled wallet or isolated game-value account
Authorization	Issuer and processor approval	Device intent, event rule acceptance, and network validation
Settlement	Processor batches and bank payout	Blockchain confirmation or local offline transfer
Reversibility	Chargebacks and processor disputes	Blockchain finality; policy-based event correction must be separate
Payout	Manual award, ACH, check, or vendor disbursement	Published rule engine to winner wallet or game-value account
Evidence	Processor reports plus organizer spreadsheets	Signed transaction record, SHA-256 event envelope, public archive, and governance record
Geography	Processor and banking coverage	Network access plus jurisdiction, sanctions, and identity controls
Failure mode	Processor outage, frozen merchant account, reconciliation error	Key loss, wrong address, chain congestion, replay, device compromise

The architectural opportunity

A pop-up model does not eliminate intermediaries or law. It **reassigns responsibility**. The participant assumes more responsibility for keys and addresses; the organizer assumes more responsibility for rule clarity, eligibility, event integrity, fee disclosure, sanctions screening where applicable, dispute handling, and evidence retention; the software operator assumes more responsibility for secure transaction construction and truthful user interfaces.

POTENTIAL EFFICIENCIES

Fewer payment-vendor handoffs, direct receipts, common wallet UX, rapid deployment, and more transparent fee display.

TRANSFERRED RISKS

Irreversible loss, volatile network fees, chain congestion, compromised recovery material, sanctions exposure, and inconsistent state-law treatment.

CONCEPT OF OPERATIONS

From Venue to Governed Digital Community

The temporary community is created by rules, roles, identity, authorization, and evidence—not by the wallet alone.

Seven-stage operating cycle

STAGE	CONTROL POINT	MINIMUM EVIDENCE
1	Publish rules	Define eligibility, value domain, entry, prizes, organizer compensation, refunds, conduct, disputes, and shutdown conditions.
2	Register participants	Verify age and identity to the level required by jurisdiction and risk; bind a player identity to an approved device and wallet.
3	Authorize entry	Present destination, amount, asset, network charge, service fee, and event identifier before strong user confirmation.
4	Run competition	Monitor match integrity, conduct, device status, anti-cheating signals, and operational exceptions.
5	Verify result	Require dual control or independent validation before a payout instruction is released.
6	Settle outcome	Execute the published distribution, record transaction identifiers, and disclose pending/final status.
7	Seal vault record	Create the append-only competition envelope, bind its SHA-256 hash, publish the permitted record view, and preserve disputes, appeals, and incident evidence.

Role separation

PARTICIPANT

Controls keys

Verifies destination, amount, network, fee, and biometric intent.

ORGANIZER

Controls event

Publishes rules, verifies results, handles disputes, and preserves records.

SOFTWARE OPERATOR

Controls code

Builds, signs, distributes, monitors, patches, and truthfully describes the app.

INDEPENDENT REVIEWER

Controls assurance

Tests security, reconciles records, and validates governance claims.

REFERENCE ARCHITECTURE

Separated Value Domains, Shared Control Plane

A common mobile chassis can present a consistent event experience, but real-asset and no-real-value domains must remain technically and operationally isolated.

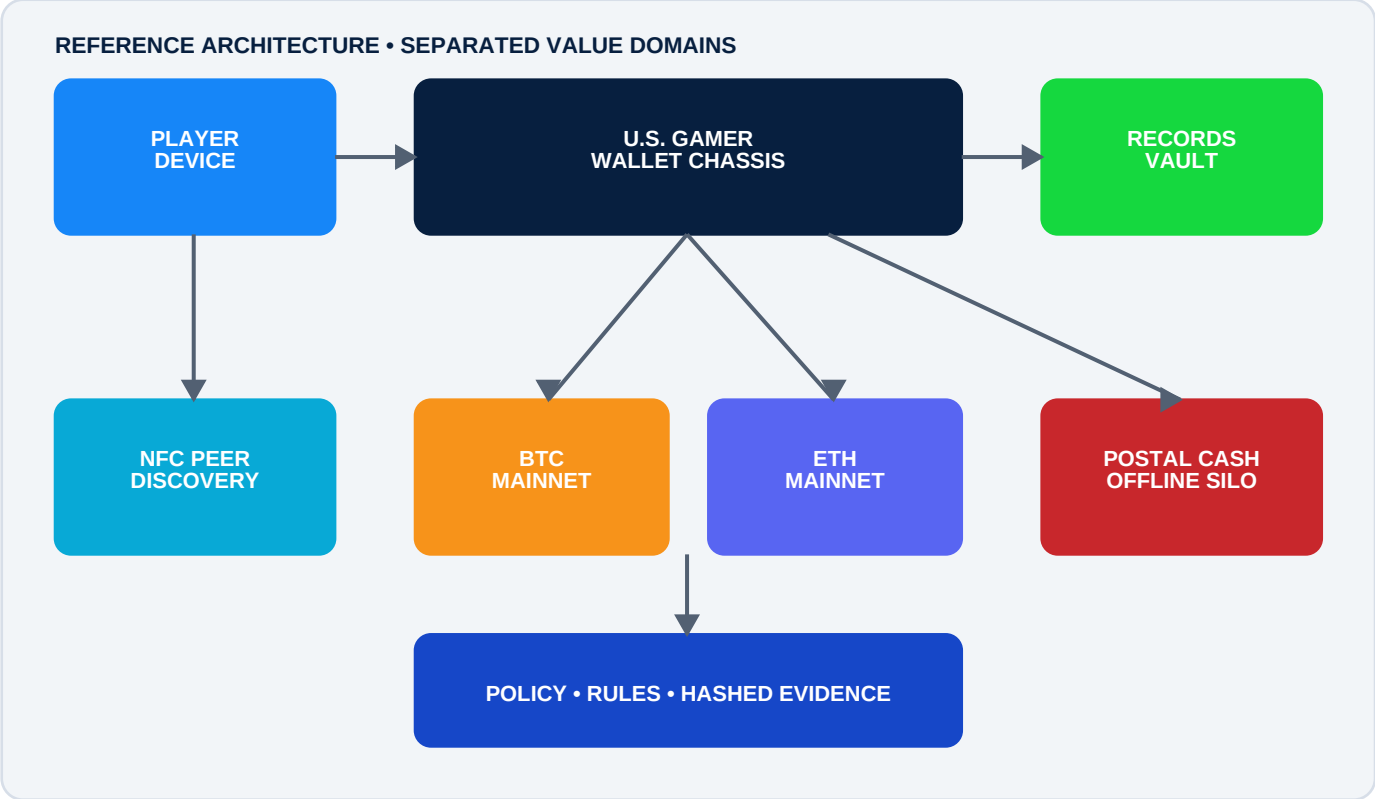

Figure 1. Target reference architecture. The Records Vault observes rules, outcomes, and receipts; it must remain separate from wallet custody and automatic settlement.

Architectural requirements

CONTROL	TARGET REQUIREMENT
Value-domain isolation	Separate key material, state, histories, transaction builders, network identifiers, fee logic, and error handling for BTC, ETH, and Postal Cash.
Intent binding	Bind biometric authorization to a canonical transaction summary that includes asset, network, destination, amount, event identifier, and all fees.
Records Vault	Store the signed ruleset hash, participant acknowledgment, match identifier, result authority, settlement reference, status transitions, and integrity envelope without collecting private keys.
No hidden custody	Do not pool participant funds or permit discretionary operator transfers without a separately approved custody and compliance model.
Fail-closed behavior	Reject cross-silo, wrong-network, malformed, replayed, stale, and unverifiable requests before presenting an approval prompt.
Observability	Record security events and settlement state without collecting recovery phrases, private keys, raw biometrics, or unnecessary personal data.

SYSTEM EXPERIENCE

Public Portal and Mobile Wallet

The user experience joins deployment, governance, self-custody wallets, isolated game value, event records, and media in one branded operating surface.

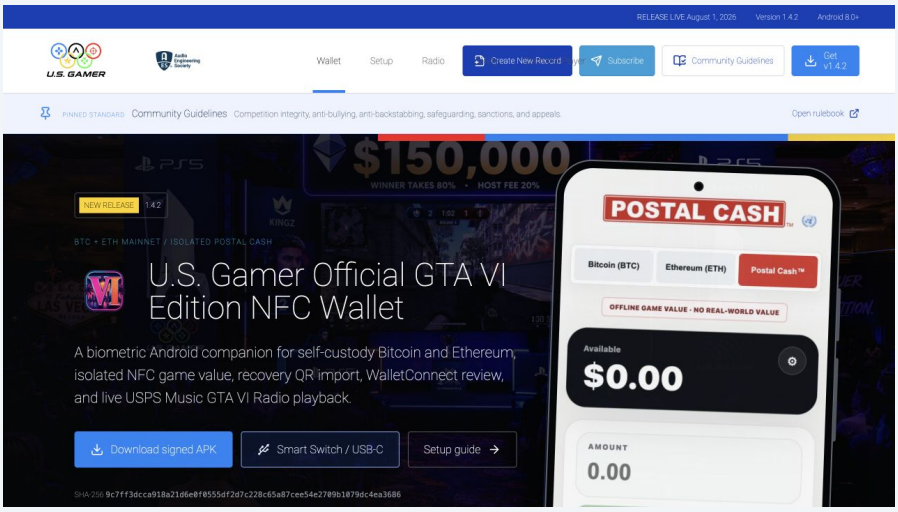

Figure 2. Live usgamer.org portal captured 02 August 2026. The portal combines release distribution, setup, rulebook access, event records, and system disclosures.

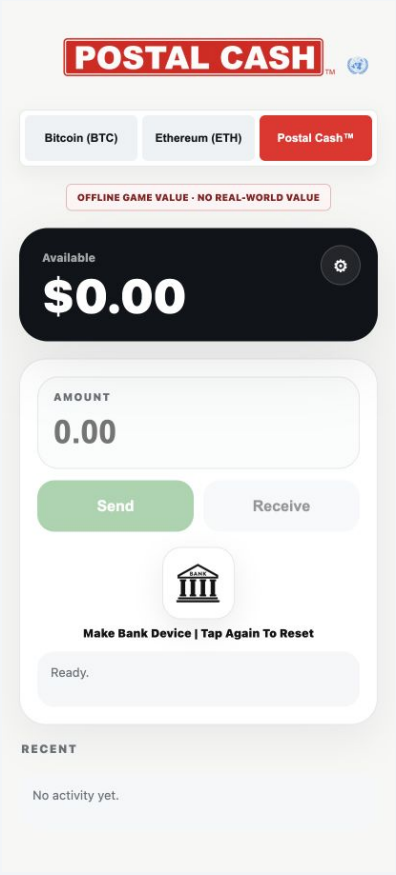

Figure 3. Postal Cash silo in the current public 1.4.2 system image. It is labeled as offline game value with no real-world value.

Experience principles

- State the active value domain before the amount.
- Keep the approval summary stationary and complete.
- Use plain-language pending, sent, settled, failed, and reversed-by-policy states.
- Show network charges separately from service fees.
- Distinguish external-wallet export from NFC event sends.
- Place rules, support, disputes, and record creation near the transaction journey.

The public portal is a distribution and education surface. It should not request wallet access unless a user deliberately enters a separate authenticated event flow. Download integrity, release identity, supported-device policy, and revocation instructions should remain visible and machine-verifiable.

RECORDS VAULT

The Trusted Record Layer

The Records Vault gives a temporary event a durable, independently inspectable evidence plane while expressly remaining outside wallet custody and automatic settlement.

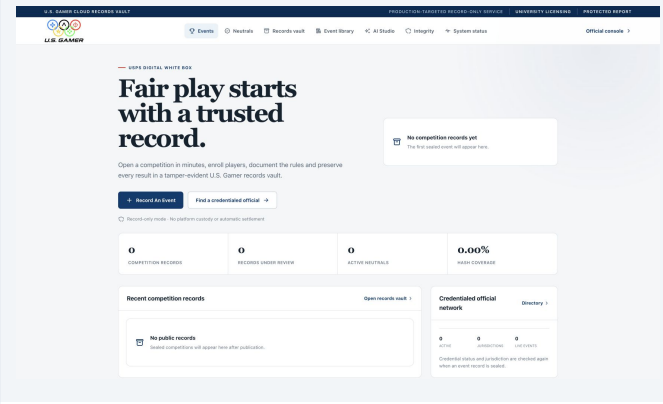

Figure 4. Live Records Vault dashboard captured 03 August 2026. The service describes a record-only lifecycle, wallet-control verification, and SHA-256 integrity coverage.

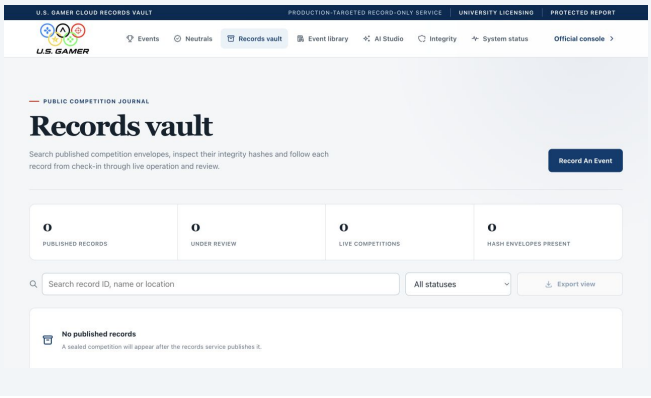

Figure 5. Public records archive. Published competition envelopes can be searched, filtered, exported, and inspected for integrity hashes.

The live service states that event creation is authenticated and append-only, wallet ownership is demonstrated through a signed challenge, amounts are stored in integer base units, and accepted records receive a SHA-256 integrity hash.[13][14] This creates a verifiable chain from rules and officials to result, settlement reference, review, and archive without requiring the vault to possess participant recovery material or sign asset transfers.

BOUNDARY

Record-only

No platform custody and no automatic settlement are claimed by the live service.

WALLET PROOF

Signed challenge

The official proves control of a public wallet without a transaction or gas fee.

INTEGRITY

SHA-256 envelope

Accepted records receive a content-integrity anchor for later comparison.

PUBLIC UTILITY

Searchable archive

Permitted event envelopes expose lifecycle state and hashes without exposing private keys.

INSTITUTIONAL ADVANTAGE

The vault separates the evidence function from the asset function. That division reduces pressure to centralize participant funds merely to obtain a common event ledger and gives reviewers a consistent record even when settlement occurs on different networks or in isolated Postal Cash.

AGILE MOBILE BACKING

BTC and ETH for Rules-Governed Pop-Up Play

Participant-controlled Bitcoin and Ethereum can fund or settle authorized competition outcomes at temporary venues while the Records Vault preserves the evidence chain required by U.S. Gamer rules.

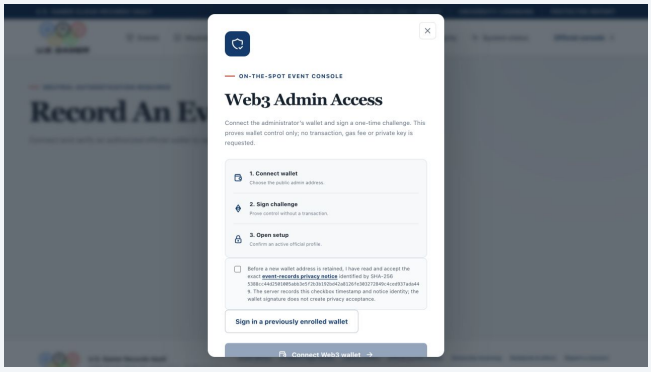

Figure 6. Official event console. Administrative access requires a public wallet and one-time signed challenge; no transaction, gas fee, or private key is requested.

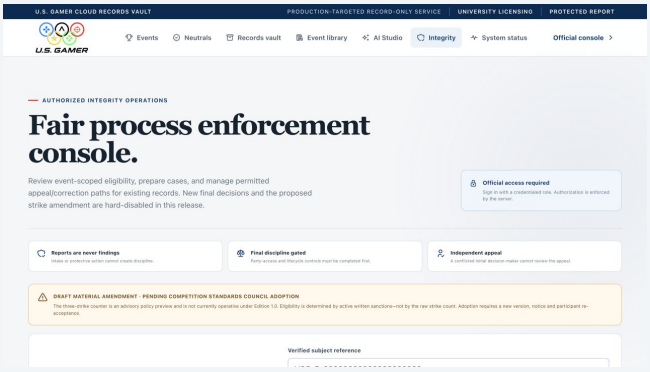

Figure 7. Integrity console. The live interface separates reports from findings, gates final discipline, and preserves notice, response, conflict, and appeal controls.

MEANING OF BACKING

In this paper, BTC or ETH 'backing' means that participant-owned digital assets are the disclosed settlement asset or prize-funding source under an approved event ruleset. It does not mean a peg, platform guarantee, insured deposit, redemption promise, escrow service, or custody claim.

MOBILE ADVANTAGE	CONTROL THAT MAKES IT DEFENSIBLE
Rapid venue deployment	A supported Android device can join a short-duration event without installing a merchant terminal stack; the event still requires named officials and a published ruleset.
Portable self-custody	Participants keep their own BTC or ETH keys; the event and vault receive only the minimum public identifiers and evidence references they require.
Chain-native receipts	Transaction IDs and confirmation state can be referenced in the competition envelope without rewriting blockchain history or treating a network receipt as proof of a match result.
Rules-to-record traceability	Ruleset hash, event ID, officials, participant acknowledgments, result authority, settlement reference, disputes, and appeals can be preserved as one evidence journey.
Jurisdictional modularity	Event configuration can cap value, restrict eligibility, choose Postal Cash, test networks, or mainnet, and stop deployment where law or operating controls are unresolved.
No hidden custody	The Records Vault authenticates officials and preserves records; it does not request recovery phrases, sign transfers, pool assets, or automatically distribute prizes.

This architecture does not legalize wagering, waive state gaming law, eliminate sanctions or consumer-protection duties, or establish that any event is permissible. Mainnet use remains contingent on the event design, participant roles, jurisdiction, custody facts, tax treatment, and independent legal and security review. The Records Vault supplies evidence; it does not supply legal authority.[15][16]

VALUE ARCHITECTURE

Three Wallet Silos, Three Risk Profiles

A single interface does not make the underlying assets equivalent. Controls must follow the value domain.

BITCOIN	ETHEREUM	POSTAL CASH
Public description Self-custody BTC mainnet wallet with UTXO settlement, address recovery, history, and NFC discovery.	**Public description** Self-custody ETH mainnet wallet with gas visibility, address recovery, history, and NFC discovery.	**Public description** Isolated offline competitive value, no blockchain, and no represented real-world monetary value.
Primary risks UTXO selection, fee estimation, change address handling, address substitution, irreversible broadcast.	**Primary risks** Gas estimation, chain ID, nonce management, address substitution, smart-contract and RPC dependencies.	**Primary risks** Replay, stale balance, double-spend across devices, reset abuse, counterfeit event state, player confusion.
Required evidence Test vectors, signed transaction decoding, watch-only reconciliation, recovery and export tests.	**Required evidence** Chain-ID enforcement, nonce tests, RPC-failure behavior, signed transaction decoding, reconciliation.	**Required evidence** Offline protocol specification, monotonic transaction IDs, duplicate rejection, multi-device consistency tests.

Non-negotiable isolation controls

- No request may cross from one value domain into another through a shared identifier, cached amount, stale NFC payload, deep link, or UI state.
- The active domain must be explicit in the approval screen and cryptographically bound to the transaction or offline transfer record.
- Postal Cash must never display exchange rates, withdrawal paths, or language implying redeemability for fiat or digital assets.
- A recovery or export action in one domain must not reveal, modify, or reset key material or history in another domain.

PILOT RECOMMENDATION

Use Postal Cash to validate tournament rules, role separation, NFC reliability, dispute handling, accessibility, and event records before introducing any material-value asset.

SETTLEMENT MODEL

Disclosure Before Authorization

Every value movement should be explainable as a rule-based instruction, not a hidden processor decision or an individualized wager.

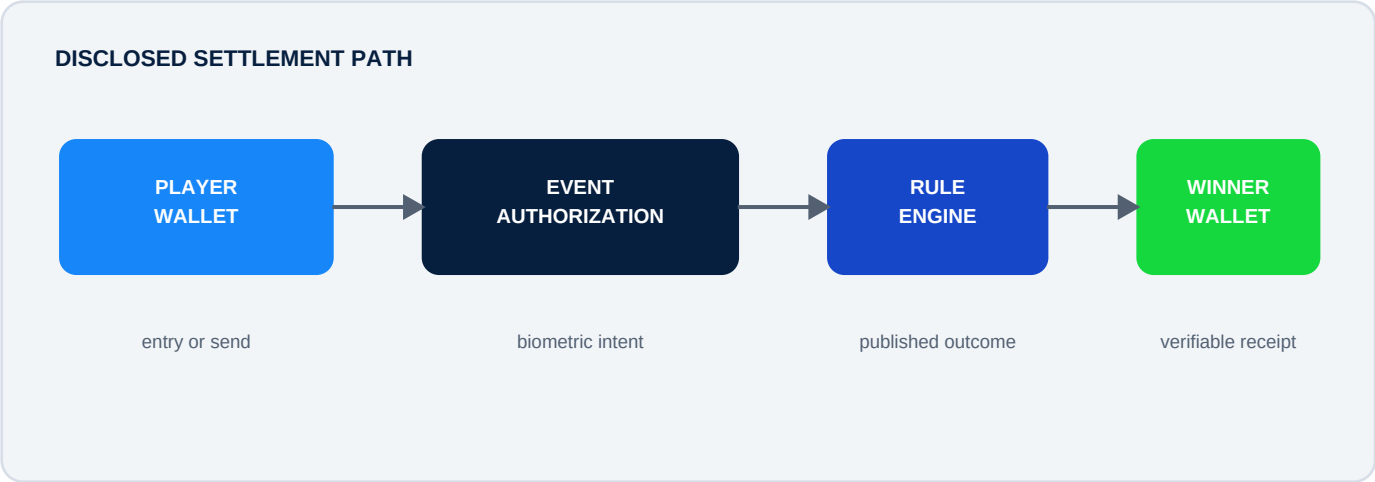

Figure 8. Target settlement path. The event authorization layer verifies intent and policy; the rule engine verifies the published outcome; the network or offline protocol produces the receipt.

Fee and accounting policy

ACTION	USER DISCLOSURE	ACCOUNTING TREATMENT
BTC or ETH NFC send	Recipient, asset, network, amount, blockchain charge, U.S. Gamer service fee, total debit	Separate organizer/service revenue from pass-through network charges; preserve transaction ID and event ID
BTC or ETH external export	Destination, asset, network, amount, network charge; public materials state no U.S. Gamer export fee	No service-fee revenue; reconcile only user-authorized asset movement and network charge
Postal Cash transfer	Player, amount, event, no-real-value notice; public materials state no service or network fee	Event ledger only; prohibit conversion, redemption, or treatment as cash equivalent
Event correction	Reason, authority, affected record, correction mechanism, and appeal path	Never rewrite blockchain history; issue a new corrective event record and, if applicable, a separate authorized transfer

Reconciliation minimum

AUTHORIZATION

Intent record

Canonical summary acknowledged by the participant.

EXECUTION

Network receipt

Transaction ID, confirmations, status, and error state.

COMPETITION

Outcome record

Ruleset hash, result authority, and payout allocation.

FINANCE

Daily control

Opening state + authorized changes = closing state, by value domain.

Any organizer-controlled service fee must be displayed before approval, legally reviewed, and tied to a disclosed service. A blockchain network charge is not organizer revenue. A flat service fee can become disproportionate on small transfers; product governance should set minimum and maximum transaction policies and monitor effective fee rates.

IDENTITY AND KEY MANAGEMENT

Strong Intent Without Centralizing Secrets

Local biometrics can activate a protected device credential, but the design must not treat a biometric match as a complete security architecture.

PREFERRED MODEL

User keys remain in platform-protected storage; biometrics activate a device-bound cryptographic operation; the app never receives raw biometric templates.

PROHIBITED MODEL

Recovery phrases, private keys, or biometric artifacts must not be sent to event servers, analytics systems, support channels, or public records.

Target authorization controls

CONTROL	TARGET IMPLEMENTATION
Device binding	Bind a cryptographic key to a supported Android device and secure hardware where available; record attestation posture without overstating assurance.
Biometric intent	Require strong local biometric confirmation for wallet opening, sends, exports, recovery import, key reveal, connection approvals, and security-setting changes.
Trusted display	Show the exact asset, chain, destination, amount, all fees, event ID, and request origin in a native confirmation surface.
Recovery	Accept only validated BIP-39 material through a private, explicit flow; warn that any observer of a phrase or QR can control the wallet.
Export	Require fresh intent, full destination review, and a clear statement that export is irreversible; do not impose a hidden service fee.
Session	Reauthenticate after risk events, inactivity, background return, device-state change, or security-sensitive navigation.

NIST alignment

NIST SP 800-63B-4 states that a biometric is not an authenticator by itself; it is used with a physical authenticator, and local biometric verification is preferred to central biometric comparison. The same publication emphasizes authenticated protected channels, replay resistance, phishing resistance at higher assurance levels, and explicit authentication intent.[6] These principles support a device-bound, local-confirmation design but do not certify any specific wallet implementation.

LOCAL COMMUNICATIONS

NFC Is a Discovery Channel, Not a Trust Decision

Proximity reduces friction; it does not prove recipient identity, transaction freshness, asset compatibility, or event authority.

A production NFC protocol should exchange the minimum information required to propose a transaction. The sender independently constructs and signs the final transfer after validating the peer payload, active value domain, network, event, and freshness. No peer should be able to cause an automatic debit, bypass the native confirmation screen, or replay a previously approved request.

Required message fields

FIELD	PURPOSE	VALIDATION
Protocol version	Prevent silent incompatibility	Reject unsupported versions; no permissive fallback
Value-domain ID	Bind BTC, ETH, or Postal Cash	Exact match to active silo; reject cross-domain messages
Network / chain ID	Prevent wrong-network transfers	Exact allowlist; include in signed or authenticated transcript
Recipient identifier	Specify destination	Canonical decode, checksum, type, and full user review
Event ID and role	Associate the request with an approved competition	Known active event; role authorization; ruleset hash
Nonce and expiry	Prevent replay and stale requests	Single-use nonce, short validity, monotonic local record
Amount proposal	Reduce typing without forcing payment	Never auto-approve; display full amount and fee summary
Authentication tag	Protect integrity where the offline protocol supports it	Verify before presentation; fail closed on mismatch

Offline Postal Cash consistency

- Use a monotonic transaction sequence or cryptographically unique transfer identifier and reject duplicates on every device.
- Always read the peer's current authoritative state before crediting or debiting; never rely on a cached card or device panel amount.
- Define interruption-safe commit semantics so moving devices apart cannot credit both parties or strand one side in an ambiguous state.
- Provide a visible reconciliation and reset procedure for event operators without granting them silent access to player balances.

CONTROL OBJECTIVE

The same event and value-domain rules must govern device-to-device, NFC, recovery, history, and export paths. A feature-specific exception is a new attack surface.

COMPETITION GOVERNANCE

Integrity Is Part of the Payment System

A wallet can settle an outcome, but only a governed competition can establish which outcome is legitimate.

The supplied U.S. Gamer rulebook establishes a foundation for competitive integrity, safeguarding, anti-bullying, anti-backstabbing, sanctions, and appeals. A production program should turn those principles into enforceable roles, evidence standards, response times, and transparent consequences.

DOMAIN	MINIMUM STANDARD	EVIDENCE
Eligibility	Age, jurisdiction, identity, device, wallet, and sanctions eligibility before entry	Participant record and screening disposition
Published rules	Versioned rules, prize structure, fees, refunds, game settings, disconnections, ties, and appeals	Signed ruleset hash and acknowledgment
Anti-cheating	Approved software, device policy, telemetry boundaries, observer roles, and evidence chain	Match evidence package and reviewer decision
Anti-bullying	No harassment, threats, humiliation, stalking, discrimination, or coordinated exclusion	Moderation record, safeguarding action, and appeal
Anti-backstabbing / retaliation	No sabotage, bad-faith reporting, retaliatory exclusion, doxxing, or abuse of private information	Incident chronology, evidence, proportional sanction
Dispute resolution	Independent reviewer, defined filing window, conflict disclosure, written outcome	Case file and final disposition
Payout control	Result validation separated from transfer approval; dual control for material value	Outcome certificate and settlement receipt
Exclusion / blacklist	Criteria, duration, notice, data minimization, review, and appeal; avoid unbounded or secret lists	Decision authority, reason code, expiry, appeal status

COMMUNITY PROTECTION

Safety rules should protect participants without becoming a tool for retaliation. Confidential reports need trained review, limited access, and a non-retaliation rule.

DUE PROCESS

Any ban or blacklist affecting participation should have documented criteria, notice, proportionality, retention limits, correction, and an appeal path.

REGULATORY POSTURE

A Framework Context, Not a Blanket Exemption

Legal treatment follows the facts: who accepts value, who controls it, who transmits it, how prizes are funded, and where participants and operators are located.

Congress.gov records that H.R. 3633, the Digital Asset Market Clarity Act of 2025, passed the House on 17 July 2025 and was received in the Senate and referred to the Committee on Banking, Housing, and Urban Affairs on 18 September 2025.[1] The Congressional Research Service describes a proposed allocation of digital-commodity oversight between the CFTC and SEC.[2] This paper does not assume enactment, implementing rules, or that the bill resolves event, gaming, money-transmission, consumer-protection, tax, or sanctions questions.

Regulatory decision matrix

QUESTION	WHY IT MATTERS	PRE-LAUNCH EVIDENCE
Is the operator accepting and transmitting value for others?	FinCEN analysis distinguishes users from certain administrators, exchangers, and money transmitters based on activity.[3][4]	Written BSA/MSB analysis of each role and flow
Is the contest a game of skill, gambling, a sweepstakes, or another regulated activity?	Classification varies by jurisdiction, game mechanics, entry, prize, chance, and operator conduct.	State-by-state and venue-specific gaming counsel memorandum
Are participants or transactions sanctions-restricted?	OFAC states that sanctions obligations apply to virtual-currency activity and recommends a risk-based compliance program.[5]	Sanctions policy, screening design, escalation, recordkeeping
Are fees and claims clear?	Consumer-protection risk rises when disclosures are hidden, claims overstate security, or app behavior conflicts with promises.[8][9]	Approved disclosures, fee tests, marketing substantiation
Are minors involved?	Age, privacy, contracting capacity, prizes, and safeguarding may change the control model.	Age gate, parental-consent analysis, youth-safety controls
Are tax and reporting obligations triggered?	Entry fees, prizes, service fees, and digital-asset dispositions can have distinct reporting consequences.	Tax counsel memorandum and operational reporting plan

REQUIRED DISCLAIMER

Do not market the CLARITY Act, self-custody, blockchain settlement, or a competition ruleset as an exemption, approval, license, or government endorsement. Obtain counsel for every jurisdiction and operating role.

SECURITY AND PRIVACY

Target Control Framework

The program should govern risk through the NIST CSF 2.0 functions and apply identity controls consistent with NIST SP 800-63B-4 where appropriate.

CSF FUNCTION	U.S. GAMER TARGET OUTCOME	PRIORITY EVIDENCE
GOVERN	Named risk owner; legal and security gates; supplier policy; vulnerability disclosure; truthful claims	Risk register, RACI, approval minutes, supplier inventory
IDENTIFY	Asset, data, key, network, dependency, device, venue, and event inventories	System/data-flow diagrams, SBOM, threat model
PROTECT	Secure key storage, least privilege, signed builds, strong intent, code review, secrets management	Build provenance, secure-storage tests, access review
DETECT	Tamper, replay, double-spend, wrong-chain, RPC anomaly, failed auth, and reconciliation detection	Alert catalog, test results, monitoring coverage
RESPOND	Containment, user notice, transaction hold policy where possible, venue escalation, evidence preservation	Incident plan, contact tree, tabletop record
RECOVER	Known-good release, key and wallet recovery guidance, record restoration, participant remediation	Recovery runbook, backup test, release rollback test

Privacy-by-design minimum

COLLECT LESS

Do not collect recovery phrases, private keys, raw biometric data, full device contents, or unrelated contacts and location.

EXPLAIN USE

Provide concise, just-in-time notices for identity, event records, sanctions screening, telemetry, and support.

SEPARATE RECORDS

Keep public competition results separate from identity, security events, and dispute evidence.

LIMIT RETENTION

Use purpose-based retention schedules and delete or de-identify data when no longer required.

PROTECT ACCESS

Apply least privilege, hardware-backed administrator MFA, immutable audit logs, and periodic access reviews.

HONOR PROMISES

FTC guidance emphasizes privacy by design, data minimization, transparency, consent for sensitive data, and reasonable security.[8][9]

Assurance work products

Before material use: independent architecture review; mobile application security test; dependency and SBOM review; cryptographic test vectors; transaction-construction review; NFC protocol test; replay/double-spend test; privacy impact assessment; incident tabletop; and documented remediation closure.

OPERATIONAL RESILIENCE

Design for Interrupted Events and Irreversible Transfers

A temporary event needs a permanent plan for outages, mistakes, disputes, and recovery.

The operating model should distinguish four states: **event unavailable**, **wallet unavailable**, **network unavailable**, and **settlement uncertain**. Each state requires a predetermined action that preserves participant rights and prevents duplicate or ambiguous transfers.

SCENARIO	DEFAULT RESPONSE	RESTART / CLOSURE CRITERIA
NFC interruption	Stop the transfer; show an unambiguous incomplete state; query both peers before retry	No debit or credit unless both sides agree on one transfer ID
RPC or chain outage	Disable new mainnet sends; preserve locally signed but unbroadcast state separately	Independent network health plus reconciliation of pending transactions
Wrong destination detected before signature	Cancel without side effect and clear the request	Fresh discovery and full re-authorization
Wrong destination after broadcast	Escalate as irreversible loss; do not mislabel as reversible or settled to the intended party	Incident record, participant notice, legal and support review
Device loss	Revoke event registration for the lost device; do not claim to revoke blockchain keys	Secure wallet recovery on a trusted device and new event binding
Result dispute	Pause organizer-initiated payout if policy permits and no transaction has been broadcast	Independent decision within published time; written outcome
Compromised release	Block download, publish advisory, revoke event eligibility, preserve evidence	Signed clean build, independent validation, participant remediation
Venue connectivity loss	Switch to approved offline mode only if the event rules and value domain permit it	Complete reconciliation before any mainnet settlement

Target service objectives for a pilot

CRITICAL INCIDENT

15 min

Target acknowledgement by the named incident lead.

PARTICIPANT NOTICE

60 min

Target initial notice for a confirmed material incident.

EVENT RECORD

0 loss

No accepted competition or settlement record may be silently discarded.

RECOVERY TEST

Quarterly

Run build rollback, record restore, and operator tabletop.

These are proposed pilot objectives, not measured current-state service levels. Formal service levels should be approved only after load, failure, and recovery testing.

DEPLOYMENT MODEL

From No-Value Pilot to Managed Mainnet Event

Deployment gates should increase assurance faster than they increase value at risk.

TIER	PERMITTED USE	MANDATORY GATES
0 • Lab	Emulator, unit tests, protocol simulation, no participant data	Threat model; test vectors; reproducible build; automated tests
1 • Postal Cash pilot	Invited participants; no real-world value; limited venue	Ruleset; NFC consistency test; safeguarding; disputes; record reconciliation
2 • Test-network / low-value	Approved test networks or controlled low-value accounts	Independent security review; key-recovery test; transaction decoding; incident tabletop
3 • Managed mainnet pilot	Named jurisdiction, adult participants, capped value, named operators	Legal opinions; sanctions design; penetration test; insurance/risk acceptance; dual control
4 • Scaled event	Multiple venues or larger value under a formally governed program	Production SLOs; continuous monitoring; external audit; vendor management; regulator engagement as applicable

Distribution and device posture

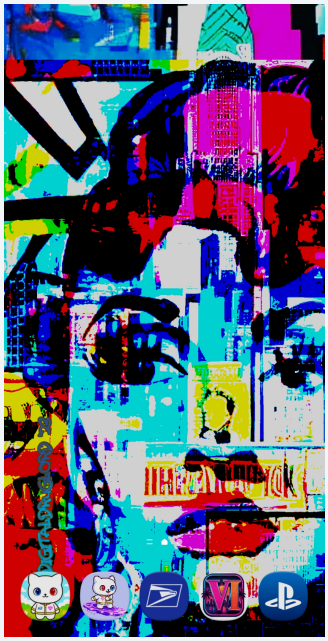

Figure 9. Managed-device concept image supplied with the public portal.

Signed release controls

- Publish APK/AAB hash, signer identity, version, support window, and revocation status.
- Use a documented, access-controlled signing process with offline recovery and key rotation.
- Treat Smart Switch or USB-C restore media as a software-supply-chain channel requiring manifest, signature, provenance, and malware scanning.
- Re-enroll device biometrics after restore and independently verify wallet addresses and recovery material.
- Do not represent consumer sideloading warnings as proof of malware or proof of safety.

MANAGED-DEVICE PRINCIPLE

A restored image can accelerate deployment, but it also magnifies a compromised build. No event should trust an image merely because it came from branded media.

ANCILLARY SUBSYSTEM

Audiophile Media Without Expanding Wallet Trust

The Diamond Player and USPS Music presentation can enrich the event experience, but media processing should not share secrets, authorization state, or privileged wallet permissions.

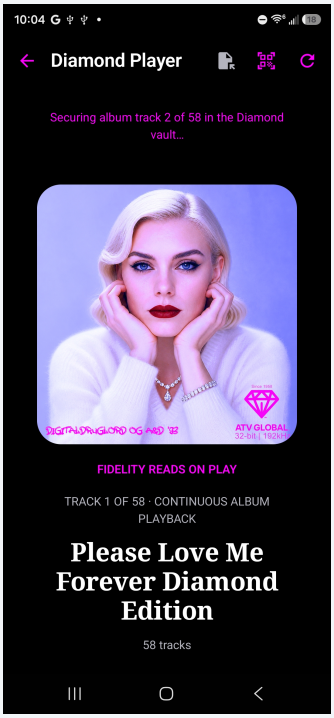

Figure 10. Supplied Diamond Player screen showing local high-resolution playback metadata.

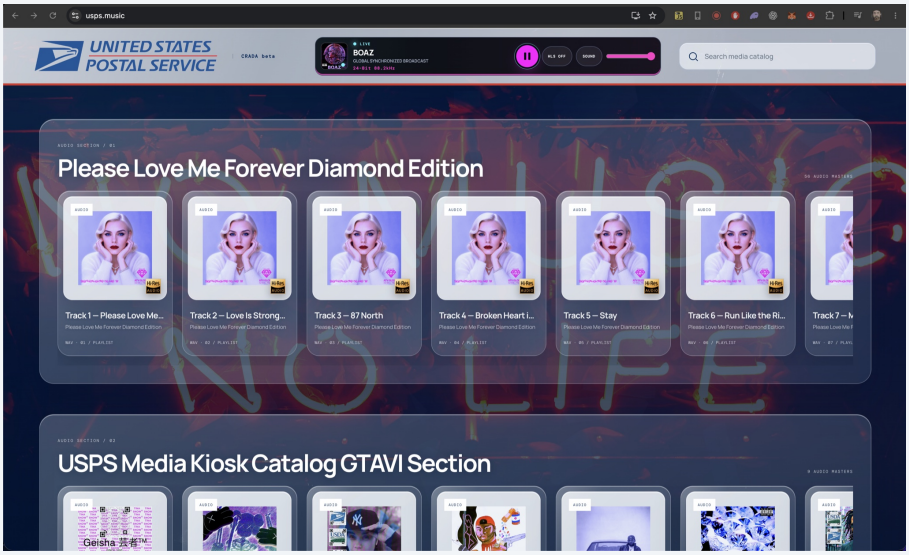

Figure 11. Supplied USPS Music catalog image used by the public U.S. Gamer audiophile page.

Separation requirements

MEDIA CAPABILITY	WALLET BOUNDARY
HLS and WAV-direct playback	No access to private keys, recovery material, wallet database, transaction builder, or NFC payment payloads
QR / media handoff	Strict content-type and size validation; never interpret media QR data as a wallet command
Background playback	No relaxation of biometric timeout, foreground confirmation, or protected-screen policy
DAC / headset metadata	Informational only; no effect on transaction authorization or event eligibility
Catalog and artwork	Content provenance, licensing, privacy, and telemetry reviewed independently from wallet security

Public portal materials state that the wallet includes radio controls while the standalone Diamond Player app is available through the supplied Smart Switch image. That packaging choice should not create hidden permissions or an undocumented dependency between media and financial functions.

MEASUREMENT AND EVIDENCE

Operate What Can Be Proved

A credible program reports control performance and failure rates, not just downloads, balances, or tournament volume.

Pilot scorecard

MEASURE	DEFINITION	PILOT TARGET / GATE
Authorization integrity	Approved transactions whose decoded payload exactly matches the displayed summary	100%; any mismatch halts the pilot
NFC duplicate rate	Duplicate credit or debit after retry, interruption, or replay testing	0 in test corpus and live pilot
Reconciliation variance	Difference between authorized event records and domain-specific ledger/network state	0 unexplained variance
Vault hash coverage	Accepted competition envelopes with a retrievable SHA-256 integrity hash and lifecycle state	100% of accepted records
Recovery success	Successful restore from valid recovery material on a clean supported device	100% of approved test cases
Cross-silo rejection	Wrong-domain or wrong-network requests rejected before approval	100% of negative tests
Biometric enforcement	Sensitive flows completed without required strong confirmation	0; fail closed
Dispute timeliness	Cases acknowledged and resolved within published service targets	>=95% within target
Safety response	Substantiated bullying, retaliation, or safeguarding reports with documented action	100% documented; trend reviewed
Security remediation	Critical/high findings closed before the next deployment tier	100% critical; risk acceptance for any high
Disclosure comprehension	Participants correctly identify asset, fees, irreversibility, and support path	>=90% in pre-pilot usability test

Minimum evidence package

BUILD

Provenance

Commit, dependencies, SBOM, signer, hash, test report.

EVENT

Vault envelope

Ruleset hash, acknowledgments, roles, result, settlement reference, integrity hash.

SETTLEMENT

Receipts

Authorization summary, transaction ID, confirmations, reconciliation.

GOVERNANCE

Cases

Incidents, disputes, moderation, sanctions, appeals, outcomes.

Evidence should be tamper-evident, access-controlled, purpose-limited, and retained only as long as required. Public competition records should contain the minimum necessary information and should not expose personal identity, private wallet recovery data, or security telemetry.

IMPLEMENTATION ROADMAP

Gated Delivery, Not Feature Accumulation

The shortest credible route to scale is a sequence of narrow pilots with explicit stop conditions.

WINDOW	PHASE	DELIVERABLES	EXIT GATE
0–30 days	Baseline	Freeze architecture; inventory code, dependencies, keys, domains, data, claims, and operator roles; establish risk owner and legal workstream.	Approved scope and threat model
31–90 days	Postal Cash pilot	Specify offline protocol; complete replay/interruption tests; finalize rules, safety, disputes, record model, and operator training.	No-value pilot with zero unexplained variance
3–6 months	Assurance	Independent mobile review, penetration test, cryptographic review, privacy assessment, incident tabletop, build provenance, and remediation.	Critical findings closed; high findings accepted or closed
6–9 months	Low-value test	Use controlled wallets/test networks; verify history, recovery, fee disclosure, reconciliation, and participant comprehension.	Legal and security gate for selected jurisdiction
9–12 months	Managed mainnet pilot	Capped value, adult participants, named venue, dual control, sanctions process, support and insurance posture.	Independent go/no-go review

Top program risks

ID	RISK	INHERENT	PRIMARY TREATMENT
R1	Regulatory misclassification	High	Jurisdiction-specific legal opinions; role and flow mapping; no exemption claims
R2	Key or recovery compromise	Critical	Hardware-backed storage, secure display, recovery isolation, independent crypto review
R3	Wrong-chain / wrong-address transfer	Critical	Canonical transaction review, chain binding, address validation, test vectors
R4	Offline duplicate or stale balance	High	Protocol specification, nonce/sequence, interruption-safe commit, reconciliation
R5	Software supply-chain compromise	Critical	Reproducible build, SBOM, signed provenance, protected signer, revocation
R6	Bullying, retaliation, or blacklist abuse	High	Confidential reporting, independent review, proportionality, appeal, retention limits
R7	Misleading affiliation or security claims	High	Claim substantiation, trademark review, clear independent-status disclosure
R8	Participant fee misunderstanding	Medium	Pre-approval total, service/network fee separation, comprehension testing

CONCLUSION

Proceed Only Through Evidence-Based Gates

The Pop-Up Community Wallet model is a credible architecture hypothesis. Its legitimacy will be earned through transparent rules, technical assurance, participant protection, and jurisdiction-specific compliance.

The model's central contribution is not simply a new payment interface. It is the idea that a temporary physical event can become a **governed digital community** with explicit membership, separated value domains, published competition rules, secure participant intent, verifiable settlement, and a durable Records Vault envelope.

That architecture can reduce operational fragmentation and increase transparency. It can also concentrate new risks: irreversible loss, key compromise, wrong-network transactions, offline replay, sanctions exposure, legal misclassification, privacy overcollection, and misuse of community sanctions. A responsible program therefore scales controls before it scales value.

The Records Vault materially improves the concept by separating authenticated event evidence from self-custody asset execution. It allows agile Android deployments to reference BTC or ETH settlement without turning the record service into a custodian, and it gives Postal Cash pilots the same rules-to-result evidence discipline. This is an architectural advantage, not a substitute for legal authority, operational competence, or independent assurance.

Go / no-go preconditions

GATE	REQUIRED CONDITION
Legal	Written analysis for event classification, money transmission, sanctions, consumer protection, tax, age, privacy, and the selected jurisdiction.
Security	Independent architecture, cryptography, mobile, NFC, supply-chain, and penetration testing with remediation closure.
Operations	Named owners, training, rules, disputes, incident response, reconciliation, participant support, and release revocation.
Evidence	Authenticated Records Vault envelope covering rules, officials, authorization, result, settlement reference, moderation, appeal, and incident evidence with privacy controls.
Pilot	Postal Cash no-value pilot completed without unexplained variance, duplicate transfer, cross-silo acceptance, or unresolved critical incident.

Recommended institutional position

CONDITIONAL PROCEED

Authorize a bounded no-real-value pilot and independent assurance program. Do not authorize material-value public competition until every precondition above is closed by an accountable owner and independently reviewed.

The public U.S. Gamer materials, live Records Vault, and supplied concept brief provide a coherent starting point. This white paper converts that starting point into a testable governance and control agenda. It should be maintained as a living artifact: each version must identify which statements describe current implementation, which are target requirements, and which remain unverified assumptions.
